

## Distributed Reduplication: Volume 52 (Hardback)

By John Frampton

MIT Press Ltd, United States, 2009. Hardback. Condition: New. Language: English. Brand new Book. An original and comprehensive approach to reduplication, with extensive examples and case studies in many languages. A convincing account of reduplicative phenomena has been a longstanding problem for rule-based theories of morphophonology. Many scholars believe that derivational phonology is incapable in principle of analyzing reduplication. In *Distributed Reduplication*, John Frampton demonstrates the adequacy of rule-based theories by providing a general account within that framework and illustrating his proposal with extensive examples of widely varying reduplication schemes from many languages. His analysis is based on new proposals about the structure of autosegmental representations. Although Frampton offers many new ideas about the computations that are put to use in reduplicative phonology, some fairly radical, his intent is conservative: to provide evidence that the model of the phonological computation developed by Chomsky and Halle in 1968 is fundamentally correct—that surface forms are produced by the successive modification of underlying forms. Frampton's theory accounts for the surface properties of reduplicative morphemes by operations that are distributed at various points in the morphophonology rather than by a single operation applied at a single point. Lexical insertion, prosodic adjustment, and copying can each make...
